SMS Expanded Implementation Course is Coming to Hawaii!
Mark your calendar for May 12-16, 2014!

TACG will be delivering our popular Safety Management Systems Expanded Implementation course in Honolulu, HI on May 12-16, 2014. Sticking to our longstanding tradition of making our training "a day at the beach," this event will not disappoint; the training venue will be at the Hilton on Waikiki Beach!

This course will be convenient to all (and any type) of aviation operator in the Hawaiian islands. However, we invite operators from other locations to attend as well. Airlines offer many nonstop flights to Honolulu from the west coast of the United States and the Pacific Rim region!

Hilton, Waikiki Beach

Waikiki Beach

In the U.S., SMS is not currently mandatory for most operators, but this will soon change. We suggest being proactive and "staying ahead of the curve" by beginning your SMS implementation now, as SMS will be required by mandate in the very near future. For operators outside of the U.S., SMS may or may not be mandatory at this time, depending on your geographic location. Regardless, if your country is signatory to ICAO, your CAA will soon require you to have an SMS if you do not already have one.

This SMS Expanded Implementation course will provide you with all the necessary knowledge and tools you will need to implement your company's SMS

Course Overview

This is a total immersion course that will allow the attendee to fully understand Safety Management principles as well as how to implement a functional Safety Management System at his/her own organization. Our SMS Expanded Implementation course is developed in accordance with ICAO's Document 9859 (Safety Management Manual rev. 3) and easily meets and exceeds the recommended training requirements set forth by ICAO as well as CAA's and Regulators worldwide.

This comprehensive course begins with an in-depth presentation on the fundamentals of safety and safety management then progresses into the heart of Safety Management System development, implementation, and ongoing operation. Additionally, attendees will receive extensive training on how to conduct a GAP analysis and develop their own customized SMS manual (template included in course). Attendees will also receive an SMS software demonstration with the option to purchase software through our world-class SMS software partner SMS-Pro®.

Meet your instructor

Dr. Bob Baron

Dr. Baron's full bio can be viewed by [clicking here](#)

Dr. Baron began teaching and consulting in SMS in 2006, long before SMS became a buzzword in the United States. Today, it seems like everybody is (or wants to be) an SMS expert. Sadly, this has led to poor guidance, and ultimately, much frustration for organizations attempting to implement a functional SMS. SMS is not something that should be attempted by someone without the proper qualifications and experience. An analogy would be: Yes, you could have a nurse remove your gall bladder but you'd probably have much better results if you had a trained surgeon remove it! The same applies to SMS. Dr. Baron did not jump on the SMS bandwagon; instead, he has developed a foundation of academic and practical experience that has been time tested. He has a Ph.D in Industrial and Organizational Psychology (the things safety culture and SMS are built on), has conducted dissertation research on safety climate at an aircraft maintenance facility, and works globally (in the trenches) as an aviation safety consultant, implementing SMS and acting as a cultural change agent in some of the most challenging parts of the world.

WHO SHOULD ATTEND? This total submersion course is geared towards those people responsible for the implementation of their organization's SMS

COURSE DURATION: 40.0 hrs. (5 days)

TIME: 8:00am-5:00pm daily (includes a one hour break for lunch)
